

We are a specialist coachbuilding and manufacturing business that prides itself on its heritage and reputation for high quality engineered solutions .

As part of our portfolio we offer:-

Quiet, dependable power systems

Acoustically enclosed power generation for the film and TV industry and other noise sensitive applications can be provided as well as back up and emergency gensets.

Power options available for stage V are 40kW to 500 kW, installed on skids, trailers or within a compact acoustic enclosure specifically designed for use anywhere silent power is required.

Either fifth wheel mounted / demountable, trailer, static or vehicle-mounted and custom built to provide long, reliable service. In all cases ease of access is a major design consideration, sets are generally individually housed and provided with large hatches or service access doors.

Whatever the build, the result is rugged, durable and reliable.

Soundproofing to a maximum level of 60 dB(A)* or better at three metres (free field) is achieved using our own specialist coachbuilding techniques in the housing construction, careful selection of top quality mountings and highly developed engine exhaust silencing systems.

STAGE V POWER SYSTEMS

POWER SOLUTIONS RANGING FROM 40KW TO 500KW – STATIC SKID SETS, TRAILER AND COMPLETE VEHICLE SOLUTIONS

ADVANTAGES OF MOBILE POWER SOLUTIONS

- Stage V emissions compliant
- We can offer 4x4's, towed trailers, vans or rigid back HGV's to customers. 4x4's, towed trailers and vans can be driven by competent drivers removing the need for HGV trained drivers.

WE ARE READY TO WORK WITH YOU TO PROVIDE A SOLUTION TO YOUR POWER NEEDS

(Plastic bodied isuzu)

(Aluminium bodied Isuzu)

With your approval the latest controls technology will be used such as Deep Sea plc, CRE Technology (Gensys) and the ComAp variants including the Intellite range. This can include the latest developments in remote communications and monitoring facility. For example the latest controllers come with web packages to support the products such as AirGate. There is also on-line control and monitoring offered by web pages. GSM/GPRS modem connections can be offered or wireless Internet via IL-NT GPRS additional cards.

External hard wired connectivity to the controllers can be achieved in many ways such as panel mounted USB, RS232 or RS232-485 connections. Remote alarm features are also available such as SMS messages on alarm
